EndureQR SEO audit: endureqr.vercel.app

27 October 2026 · Claude SEO v2.5.0 · 57 pages crawled (all 200) · 10 specialist checks

Specialist reports are in `findings/`: technical, content, schema, performance, geo, agentic, sxo, backlinks, sitemap and visual. Screenshots are in `screenshots/`.

Not measured: there was no Search Console, GA4, CrUX field data or keyword-volume source, so rankings, traffic, real-user Core Web Vitals and search volumes are unknown. Performance is lab data (Lighthouse mobile, 3 runs per page).

Executive summary

SEO Health Score: 76 / 100. Business type: SaaS (free QR tools plus paid dynamic codes), pre-launch.

Category	Weight	Score
Technical SEO	22%	82
Content quality (E-E-A-T)	23%	63
On-page SEO	20%	86
Schema	10%	76
Performance	10%	93
AI search readiness (GEO 63, agent readiness 78)	10%	67
Images	5%	60

This is stricter than the earlier single-pass estimate of 85. Eight specialists scored E-E-A-T, brand entity and search intent in depth, and those areas are where a new, anonymous site is weakest.

The site is technically sound. Every page is server-rendered with clean canonicals, titles, descriptions and headings. The sitemap matches the crawl exactly. Security headers, including a CSP, are on every page. Mobile Lighthouse scores 95–100, CLS is 0, and AI crawlers get every page.

What holds it back is trust and identity, not code:

- **Unregistered domain:** endureqr.com isn't registered, yet all contact emails use it.
- **Anonymous site:** no person or legal entity is named anywhere.
- **Temporary short links:** dynamic codes print a link on a temporary vercel.app host.
- **No outside signals:** the guides cite no sources and contain no images, and there's no presence elsewhere on the web.

Top 5 issues

1. **Critical: endureqr.com is unregistered,** but hello@, privacy@ and abuse@endureqr.com appear on 53 of 57 pages, in the structured data and in llms.txt. Mail bounces, and anyone could register the domain and receive it.

2. **High: "keeps working forever" isn't backed up.** Paid codes would print `endureqr.vercel.app/r/…`, a host you don't own, and no page says what happens if EndureQR itself closes.
3. **High: the dynamic-code page doesn't match its search intent.** Top results let you make a dynamic code first (usually with a free tier); ours is a sales page with only "Start Pro".
4. **High: no named people or legal entity.** That covers guide authors, About, and the data controller in Privacy, which hurts E-E-A-T on how-to and safety content.
5. **High: the brand entity is split.** Only the homepage defines the Organization with an `@id`. About, Article publisher and the app schema each declare their own unnamed copy, there's no `sameAs`, and the logo is a 32 px icon.

Fixed during this audit (deployed, commits 44d1730 and 8dc3c15)

- The old address's **homepage** now redirects (308) too. Before, only inner pages did.
- A **homepage claim** that contradicted pricing ("analytics on every plan", "live map") is corrected.
- "a EndureQR" → "an EndureQR" in 8 places, and the reply-time promise is the same everywhere.
- The **H1** reads correctly to text extractors ("never stop", not "neverstop").
- An **accessibility error** on pricing is fixed (`aria-label` on a span).
- The **"Make it dynamic" upsell** no longer appears for WiFi, vCard, text and other codes that can't be dynamic.

Top 5 quick wins (each under an hour once the inputs exist)

1. Register endureqr.com and point the site, emails and short links at it.
2. Set `NEXT_PUBLIC_CONTACT_EMAIL` to a working inbox today, before the domain is ready.
3. Put the 14-day money-back line directly under every "Start Pro" button.
4. Use one Organization `@id` everywhere, with a 512 px PNG logo.
5. Add BreadcrumbList to `/pricing`, `/industries/*` and `/alternatives/*`.

Technical SEO (82)

- **Works:** all 57 pages return 200 with a self-canonical. The robots rules are intentional (`/dashboard` and `/paused` blocked; auth pages noindex). HSTS, CSP, nosniff, frame options, referrer policy and permissions policy are on every page. Rendering is server-side, with full content in the raw HTML. There are no orphan pages.
- **Open:**
    - Short links on the temporary host (High).
    - The new Search Console property isn't verified yet (Medium).
    - No IndexNow (Low).
    - `lastmod` is on only 16 of 55 sitemap URLs (Low).
    - The 404 page reuses the homepage title (Low).
    - HSTS preload is sent on a temporary host; keep that in mind for the move (Low).

Content quality (63)

- **Works:** accurate, plain writing. Every technical claim checked was correct (ISO/IEC 18004 facts, capacities, error-correction levels, RFC 2426, print maths). The 17 tool pages aren't near-duplicates (average overlap 0.19). Readability sits at grade 5–10.
- **Open:**
  - No named people (High).
  - Industry pages are short and share 7 identical sentences across all 8 (High).
  - Guides have no outbound sources or images (Medium).
  - The alternatives pages are thin (Medium).

On-page SEO (86)

- **Works:** unique titles (none over 60 characters) and descriptions (none over 160), one H1 per page, internal links rotate across guides, and all 55 sitemap pages are linked.
- **Open:** the `/alternatives/*` titles are short (27–28 characters) and target "bitly alternative", where results are link shorteners rather than QR tools (see SXO).

Schema (76)

- **Works:** all JSON-LD is valid and absolute. Breadcrumbs, Article, WebApplication, pricing Offers and the ItemList are correct.
- **Open:**
  - The Organization entity is split, with no `sameAs` (Medium).
  - The logo is a 32 px SVG (Medium).
  - Offers have no billing period (Low).
  - There's no BreadcrumbList on pricing, industry or comparison pages (Low).
  - FAQPage appears on 54 pages. It's valid, but Google retired FAQ rich results on 7 May 2026, so it's Info only: keep it, but don't expect a search-result feature.

Performance (93, lab data only)

Page	Perf	LCP	TBT	CLS
`/`	95	2.81 s	19 ms	0
`/qr-code-generator`	98	2.32 s	3 ms	0
`/qr-code-with-logo`	98	2.28 s	8 ms	0
a guide	100	1.49 s	2 ms	0
`/pricing`	100	1.57 s	9 ms	0

Real TTFB from the edge was about 0.2 s (cache HIT).

- **Homepage LCP** is on the 2.5 s line because about 90 KB of font preloads compete with the hero image (Medium).
- **Smaller items** (Low): an oversized mobile hero image, legacy polyfills (no browserslist), 2,558 DOM nodes on the home page, and hero images without long cache headers.
- **INP** can't be measured in the lab. Check it in CrUX once there's traffic.

AI search readiness (67)

- **Works:** 12 AI and search crawlers all get a 200 server-rendered page. Guides open with 59–100 word direct answers. llms.txt is valid. The generator's accessibility tree is clean enough for agents (heuristic score 96).
- **Open:**
  - No sources linked from guides (High).
  - No Bing verification or IndexNow (High, because Bing feeds ChatGPT search and Copilot).
  - No images or video (Medium).
  - No off-site presence (Medium).
  - 35% of guide H2s are phrased as questions (Medium).
  - llms.txt leaves out the 14 feature, industry and comparison pages (Low).

Images (60)

All 10 images have alt text and every page has a social image. But guides, tool and feature pages contain no images or diagrams, which matters on visual queries such as "QR code with logo".

Search experience (SXO gap score 61, 3 queries)

Query	What ranks	Our page	Match
free qr code generator	generators (about 89%)	generator, tool-first	aligned
do qr codes expire	blog posts (about 85%)	guide, answer-first	aligned
dynamic qr code generator	generators with a free dynamic tier	sales page, "Start Pro" only	**mismatch**

- **Mobile layout:** the generator's first input sits about 1,800 px down on a phone.
- **Comparison pages:** "bitly alternative" results are link-shortener lists, so retarget to "Bitly alternative for QR codes".

Backlinks

No link data exists for either hostname in the free sources (Common Crawl), and no paid source is connected. That's expected before launch. `*.vercel.app` domain metrics belong to Vercel, so don't quote them. The 90-day link plan is in `findings/backlinks.md`; most of it waits for endureqr.com.

Sections follow the claude-seo method (perceive → analyse → validate → act). Each action in `ACTION-PLAN.md` states what it rests on, what it depends on, how we'd know it failed, and an early signal to watch.

EndureQR action plan (27 October 2026)

Ordered by dependency: later items rely on earlier ones. Each item states what it rests on, what it unblocks, how we'd know it failed, and an early signal to watch.

Phase 1: before launch (this week)

1. Register endureqr.com and make it the home of the site, emails and short links. Critical.

- **Rests on:** brand, contact and printed codes all depend on a domain you control. Today none of them is on one.
- **Unblocks:** 2, 3, 6, 11, 12, AdSense, Resend email and all link building.
- **Failed if:** any page, structured data, llms.txt or a newly created short link still shows `vercel.app` or bounces mail.
- **Watch:** a test email to hello@ arrives, and the Search Console Domain property is verified.

2. Until then, set `NEXT_PUBLIC_CONTACT_EMAIL` to a working inbox. Critical.

- **Rests on:** privacy and abuse requests must reach a person.
- **Failed if:** the contact page still shows an address that bounces.
- **Watch:** send one test message from the contact page link.

3. Put short links on the owned domain before the first paid code is created, and publish the shutdown commitment. High.

- **Rests on:** "your codes keep working" is only as durable as the host in the printed link.
- **Depends on:** 1.
- **Do:** add an FAQ stating CSV export at any time, domain renewal paid years ahead, and how long redirects run after a closure (the Terms already promise 90 days' notice and export).
- **Failed if:** a new dynamic code still encodes `*.vercel.app/r/…`.
- **Watch:** the share of codes created on the owned host (target 100%).

4. Search Console and Bing for the live host, plus IndexNow. High.

- **Rests on:** pages can't rank if they aren't discovered, and Bing feeds ChatGPT search and Copilot.
- **Do:** verify the new property, submit the sitemap, import into Bing, add IndexNow.
- **Failed if:** Pages → Indexed stays at 0 after 3 weeks.
- **Watch:** the number of indexed pages in Search Console each week.

Phase 2: trust and intent (weeks 2–3)

5. Name the people behind EndureQR. High.

- **Rests on:** Google's quality guidance weighs who stands behind how-to and safety content.

- **Do:** a founder section on About, a named author and reviewer on guides (switch the Article author to Person), the legal entity in Privacy, and an /editorial-policy page.
- **Failed if:** guides still show an organisation author 30 days from now.
- **Watch:** author schema present on 16/16 guides.

6. One brand entity in the structured data. Medium.

- **Depends on:** 1 and 5.
- **Do:** reuse `/#organization` everywhere; use a 512 px PNG logo; add `sameAs` once the profiles in item 11 exist.
- **Failed if:** the Rich Results Test shows more than one Organization node without an `@id`.
- **Watch:** a brand query in Search Console starts showing the sitelinks or knowledge panel.

7. Rebuild `/dynamic-qr-code-generator` tool-first. High.

- **Rests on:** what ranks for this query lets people make a dynamic code before paying.
- **Do:** put the generator in dynamic mode at the top and ask for a plan at "Save". Consider 1 free dynamic code or a trial. Show "14-day money-back" under every "Start Pro".
- **Failed if:** the page still has no input above the fold 2 weeks after the change.
- **Watch:** the sign-up start rate from that page (needs analytics).

8. Mobile: inputs before the preview on generator pages, and no ads between the inputs and Download. Medium.

- **Failed if:** the first input sits more than 900 px down on a 390×844 phone.
- **Watch:** mobile downloads per visit.

9. Retarget `/alternatives/bitly` to "Bitly alternative for QR codes" (title, H1, intro). Medium.

- **Failed if:** Search Console shows it impressing mainly on link-shortener queries.
- **Watch:** impressions for queries containing "qr".

Phase 3: content depth (month 2)

10. Guides: sources, images and question headings. Medium.

- **Do:** link 2–4 primary sources per guide with a "checked" date; add diagrams to what-is-a-qr-code, size-for-printing, design-best-practices and static-vs-dynamic; phrase about half the H2s as questions; split sections over 200 words.
- **Failed if:** guide impressions don't grow in the 4 weeks after the update.
- **Watch:** Search Console impressions per guide; any AI citations seen.

11. Off-site presence. Medium.

- **Depends on:** 1.
- **Do:** LinkedIn, X, YouTube (how-tos that mirror the top guides), Product Hunt, AlternativeTo and SaaSHub. Add the profiles to `sameAs`.

- **Failed if:** there are no referring domains in Search Console or Bing after 60 days.
- **Watch:** referring domains in Bing Webmaster Tools.

12. Industry and comparison pages: remove the 7 shared sentences, add one real example and 2 specific FAQs each, and add BreadcrumbList. Low.

13. Performance polish: trim the font preloads (homepage LCP), add a `srcset` to the hero image, add a modern `browserslist`, and long-cache the hero images. Low.

- **Failed if:** homepage mobile LCP stays above 2.5 s in lab and field data.

14. llms.txt: add the feature, industry and comparison pages and a key-facts list (pricing, refund, cancellation policy). Add `lastmod` from real content dates for every sitemap URL. Low.

Phase 4: ongoing

- Weekly: Search Console Pages and Queries; Bing referring domains.
- After 4 weeks of data: run `/seo google` for real queries and CrUX, then `/seo cluster` to plan the next 10 pages.
- Re-run `/seo audit` after Phase 2 and compare with this report.
