StayQR SEO audit: stayqr-six.vercel.app

Audited 26 October 2026 with Claude SEO v2.5.0. Crawl covered 53 of 53 URLs (every sitemap URL; no orphan pages found). Lighthouse ran in mobile mode from a test machine in Pakistan. No Google Search Console, GA4 or keyword-volume data was available, so rankings, traffic and search volumes are **not measured** here.

Executive summary

SEO Health Score: 75 / 100. Business type: SaaS (QR code generator with paid dynamic codes), tool-led content site.

The site is well built for search. Every page returns 200 with one H1, a unique title, a meta description and a canonical tag. 49 of 53 pages carry structured data, and nothing in the crawl was hidden behind JavaScript. Tool and guide pages score 100 for Lighthouse performance.

The score is held down by one critical problem. Every canonical tag, every sitemap URL and the `robots.txt` sitemap line point to `https://stayqr.com`. That domain was registered in 2022 at GoDaddy, points to a GoDaddy server and does not answer over HTTPS. Until this is fixed, Google is told the real copy of every page lives on a site that doesn't serve it, which can stop the live site being indexed at all.

Top 5 issues

1. **Critical:** canonicals, sitemap and robots.txt point to `stayqr.com`, which doesn't serve this site (53/53 pages).
2. **High:** the 16 guides have no social preview image (`og:image` missing), so shares on social apps show a blank card.
3. **High:** `/login` and `/signup` are indexable thin pages (25 and 42 words); `/login` reuses the homepage description.
4. **Medium:** no security headers beyond HSTS (no `X-Content-Type-Options`, `Referrer-Policy`, `X-Frame-Options`, `Permissions-Policy`).
5. **Medium:** the guides have no named author or reviewer, which weakens E-E-A-T on how-to and safety content.

Top 5 quick wins

1. Generate every absolute URL (canonical, sitemap, robots, Open Graph, JSON-LD) from `NEXT_PUBLIC_SITE_URL`.
2. Add `noindex` to `/login`, `/signup` and `/auth/*`.
3. Give the guides their Open Graph image back.
4. Trim the 8 industry descriptions (165–204 characters) to about 155 so Google shows them in full.
5. Add `/llms.txt`, `/favicon.ico`, and `WebSite` + `Organization` schema on the homepage.

Technical SEO (score 62)

Check	Result
Status codes	53/53 return 200; no redirect chains
robots.txt	Allows all crawlers; blocks `/dashboard` and `/paused` (correct). Sitemap line points to stayqr.com
Sitemap	Lists all 53 indexable pages, but every `<loc>` uses stayqr.com
Canonicals	Present on 53/53, all pointing to the stayqr.com host
Meta robots / X-Robots-Tag	None set on public pages; auth pages should be `noindex`
HTTPS / HSTS	HTTPS everywhere; HSTS with preload (from Vercel)
Other security headers	Missing: CSP, X-Content-Type-Options, X-Frame-Options, Referrer-Policy, Permissions-Policy
Rendering	Server-rendered HTML; not a client-only app. Content is visible without JavaScript
`lang`	`en` on every page
favicon.ico	404 (an SVG icon exists; some crawlers and browsers still request /favicon.ico)
HTML weight	Homepage HTML is 577 KB (framework payload plus inline SVG); other pages are smaller

Content quality (score 74)

- **Depth:** the median page has 783 words in the main content. The 16 guides run about 1,100 to 1,600 words with tables, lists and FAQs; the 17 tool pages each pair the generator with steps, use cases, tips and an FAQ.
- **Thin pages:** `/login` (25 words), `/signup` (42) and `/contact` (99). Login and sign-up should be `noindex`; Contact is fine as a utility page.
- **Industry pages:** 329–376 words each. They're useful but shorter than the guides; each could gain a worked example and 2–3 more FAQs.
- **E-E-A-T:** content is accurate and specific, and competitor facts cite their sources. Weaknesses: guides are credited to "StayQR" rather than a person, there's no editorial or methodology page, and the About page names no founder or team.
- **Duplicates:** no duplicate titles or H1s. One duplicate description: `/login` uses the homepage text.

On-page SEO (score 80)

- Titles: unique, none over 60 characters. Two read "StayQR · StayQR" (`About StayQR · StayQR`, `Contact StayQR · StayQR`).
- Descriptions: present on all pages. Eight industry descriptions run 165–204 characters and will be cut off.
- Headings: exactly one H1 per page; guides use H2/H3 in order with a table of contents.
- Internal links: every page is linked from the header, the footer or the hubs. The least-linked are newer guides (1–3 inbound links each), mostly from the guides index.

Schema / structured data (score 78)

Found: FAQPage (46 pages), BreadcrumbList (37), WebApplication (18), Article (16), ItemList, Organization, ContactPage. All JSON-LD parsed without errors.

Missing:

- `WebSite` and `Organization` on the homepage (Organization is only on /about).
- `SoftwareApplication` with an `Offer` per plan on `/pricing`.
- A `Person` author on guide `Article` markup, once there is a named author.

Performance (score 88)

Page	Perf	LCP	TBT	CLS
`/`	83	3.13 s	412 ms	0
`/qr-code-generator/wifi`	100	1.49 s	3 ms	0
`/guides/what-is-a-qr-code`	100	1.57 s	5 ms	0

Lab data, one run each, mobile. The homepage cost is the 3D hero's JavaScript (TBT 412 ms) and the hero fallback image as LCP. TTFB of 670–910 ms is mostly distance from the test machine to Vercel's `sfo1` region. No field (CrUX) data is available yet.

AI search readiness (score 70)

- AI crawlers (GPTBot, ClaudeBot, PerplexityBot, Google-Extended) are all allowed by `robots.txt`.
- Pages answer their question in the first paragraph, use FAQ blocks and tables, and are server-rendered: good for citation.
- Missing `/llms.txt`, no named authors, and no `sameAs` profile links to establish the brand entity.

Images (score 85)

10 images across the crawl, all with alt text. Social preview image missing on the 16 guides.

Content gaps (not measured against live rankings)

Without keyword or SERP data, these come from the standard topic sets of established QR generator sites. They are pages StayQR could support today and doesn't have:

Gap	Fit
"QR code with logo" / custom QR code landing page	Feature exists, no dedicated page
"Dynamic QR code generator" landing page	Core paid feature; only covered by the homepage
"App store / app download QR code"	Smart redirects already do this
"Bulk QR code generator"	Paid feature, no landing page
"Google Form", "Zoom", "Spotify" QR pages	Variants of the URL type with their own search demand
"QR code for PDF / file"	Needs file hosting: a product gap, not just content

Verify demand in Google Search Console or a keyword tool before writing them.

StayQR SEO action plan

From the audit of 26 October 2026 (score 75/100). Ordered by impact.

Critical: fix now

- [ ] **Point every absolute URL at the live domain.** Canonicals, sitemap, robots.txt, Open Graph and JSON-LD all use `https://stayqr.com`, which doesn't serve this site. Generate them from `NEXT_PUBLIC_SITE_URL` instead. If you own stayqr.com, connect it in Vercel and set `NEXT_PUBLIC_SITE_URL=https://stayqr.com`. If you don't, pick the domain you will launch on. Either way, also check the contact emails (`hello@`, `privacy@`, `abuse@stayqr.com`): they only work on a domain you control.

High: this week

- [ ] `noindex` on `/login`, `/signup` and `/auth/*`; give `/login` its own description.
- [ ] Open Graph image on all 16 guides.
- [ ] Trim the 8 industry meta descriptions to about 155 characters.
- [ ] Submit the sitemap in Google Search Console and Bing Webmaster Tools once the domain is final.

Medium: this month

- [ ] Security headers: `X-Content-Type-Options: nosniff`, `Referrer-Policy: strict-origin-when-cross-origin`, `X-Frame-Options: SAMEORIGIN`, `Permissions-Policy` (camera, microphone and geolocation off).
- [ ] `WebSite` + `Organization` schema on the homepage; `SoftwareApplication` with offers on `/pricing`.
- [ ] Fix the "StayQR · StayQR" titles on `/about` and `/contact`.
- [ ] Add `/favicon.ico` and `/llms.txt`.
- [ ] Name an author or reviewer on the guides, with a short bio and an editorial-policy page.
- [ ] Homepage performance: defer the 3D hero further on mobile (TBT 412 ms, score 83).

Content and authority: next 1–2 months

- [ ] Landing pages for the gaps the product already supports: QR code with logo, dynamic QR code generator, app-download QR code, bulk QR code generator.
- [ ] Expand the industry pages with a worked example and 2–3 more FAQs each.

- [ ] Earn first links: list StayQR on SaaS and tool directories, and pitch the guides to small-business blogs.

Ongoing

- [ ] Watch Search Console coverage and queries weekly for the first 2 months.
- [ ] Re-run this audit after each content batch, comparing it with this report.
